

Historical weather forecast comparison

6-15 September 2026 | Five US stations | 25 shared station-days / 10 calendar dates

Fixed threshold: daily high at least 80°F. Forecast accuracy only; no trading-profit estimate.

Whiskers: descriptive 95% calendar-day block bootstrap (2,000 draws). Only ten dates; exploratory evidence.

Shared cases exclude abstentions and failed requests. This can bias the comparison; coverage is shown separately.

Wallet / arbitrage control: NOT EVALUATED. Historical depth and verified reference-wallet signals are unavailable.

Sources: IEM archived GFS MOS + raw NWS CLI; immutable Weather Lab prediction audits. Archive availability is assumed.
